

Ilaria Muller, *University of Milan*

I am currently an Associate Professor of Endocrinology at the University of Milan, Italy, and Basic Sciences Studies Lead of EUGOGO. I graduated from the University of Pisa, Italy (both medical degree and specialisation in Endocrinology), and then awarded a PhD in Molecular Endocrinology from Cardiff University, UK, where I spent 6 years in total, before coming back to Italy in 2019. My research interests mainly involve Graves' disease and orbitopathy (immunophenotyping, microbiota, clinical trials), thyroid autoimmunity and breast cancer, thyroid dysfunctions related to Covid-19, and thyroid disorders induced by immune reconstitution therapy (i.e. alemtuzumab for multiple sclerosis).
