

Scanwel and SPECS company and product update

Scanwel would like to use this opportunity to update the ISSC community on latest developments both at Scanwel and those of our partner companies relevant to surface science and surface analysis. Many customers will know the Scanwel name as a manufacturer of vacuum chambers and components. During the last year the company has undergone major developments in terms of new personnel, new machines and a new factory that greatly enhance our capabilities. In addition, Scanwel is your local contact for SPECS Surface Nanoanalysis as well as IONTOF, CreaTec and AFM Workshop, so we would like to introduce new developments from these companies including the new FlexProbe system for Small spot XPS and HAXPES, latest developments on EnviroESCA as well as first data from the new Astraios analyser. From AFM workshop we would also like to introduce the HR (high resolution)-AFM.
