

Helen Macintyre

Climate Change and Health Group, Centre for Radiation, Chemical and Environmental Hazards (CRCE),
Public Health England

Dr Helen Macintyre is a Senior Environmental and Public Health Scientist in the Climate Change and Health Group at Public Health England, Chilton. She has worked in the fields of Earth sciences, paleoclimate, global atmospheric modeling, atmospheric chemistry, air quality, and now works primarily in the area of climate change and human health.

Her current research explores various aspects of climate change and health, including the urban heat island (UHI), air quality, and understanding and quantifying the impacts on health, both now and in the future. Helen holds a PhD in Atmospheric Science from the University of Leeds (2010) and a BA MSci in Earth Sciences from the University of Cambridge.
