

Monday 4 July, 17:20 – 17:35

Session 4: Impact: wider applications of neutrino science

Photosensors development and application

Y Yoshizawa

Hamamatsu, Japan

We are proud that Hamamatsu Photonics has contributed to HEP society while offering photosensors with high quality and high sensitivity such as PMTs and SSDs.

We would like to continue our work for developing new products and/or improving characteristics of current products with customers such as researchers in HEP society.

The history of the PMT development for Super Kamiokande and SNO experiment will be introduced in this presentation.
